

**PATIENT**

Gryphyn Buczek

**PRESENTING CLINICAL SIGNS**

History: General malaise. Distended abdomen. Diarrhea. Grade 2/6 murmur. Lyme +. Ascites noted.  
-Current medication: Cerenia, Metronidazole, Forti flora.

**SPECIES**

Canine

**ECHOCARDIOGRAM FINDINGS**

2D, m-mode, color flow and doppler imaging is available. Mild diffuse thickening of mitral valve leaflets with no prolapse into the left atrial lumen. Mild eccentric mitral regurgitation with minimal left atrial dilation. Normal LV diameter with mildly depressed myocardial function. The tricuspid valve appears normal with trace tricuspid regurgitation. Normal right atrial and ventricular diameter and morphology indicating no overt evidence of pulmonary arterial hypertension. The pulmonic and aortic valves are normal in morphology and mobility. Normal pulmonic and aortic outflow velocities with laminar flow. No obvious aortic and trace pulmonic insufficiency. No pericardial or pleural effusion noted. No obvious cardiac masses.

**BREED**

Cocker Spaniel

**SEX**

Male Neutered

**CARDIAC CHART**

**AGE**

12 years

**REFERRING VET**

Dr. Tan

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Chronic degenerative valve disease causing mild mitral and trace tricuspid regurgitation. Lack of left atrial enlargement indicates the current risk for complication is low. The systolic function is mildly depressed, which is of unknown significance in this case. Screening for contributing issues, such as an atypical diet or hypothyroidism. No additional issues are identified.

**INVOICE**

28224

Given these findings, ascites is certainly noncardiac in origin. Further evaluation should be dictated by the abdominal ultrasound findings.

**DATE**

1/10/23

**PATIENT**

Gryphyn Buczek

In a dog with no significant left atrial enlargement, no cardiac medications are clearly indicated. Omega fatty acid supplementation and mild salt restriction may be of some long-term benefit. Monitor for development of a cough, labored breathing, exercise intolerance or collapse episodes.

**SPECIES**

Canine

Anesthetic risk is considered mild. Cardiac protective drug choices (opioid/benzodiazepine premedication, propofol or alfaxalone induction, isoflurane gas) are recommended. Pre-oxygenate for 5-10 minutes prior to induction. Monitor for arrhythmias, hypotension, and hypoxia both intra and post-operatively and intervene as necessary. Mild IV fluid restriction is recommended to avoid fluid overload. Avoid heart rate stimulating drugs such as atropine unless clinically indicated.

**BREED**

Cocker Spaniel

Recommend conservative monitoring with a recheck echocardiogram in 6-12 months, sooner if any development of clinical signs.

**SEX**

Male Neutered
