

## PATIENT

Guinness Soutar

## SPECIES

Feline

## BREED

DSH

## SEX

Male Neutered

## AGE

12 years

## WEIGHT

13.5lbs

## INTERPRETED BY

Maggie Machen Lamy,  
DVM, DACVIM  
(Cardiology)

## IMAGING PERFORMED BY

Jessica Miller

## HOSPITAL NAME

Basking Ridge Animal  
Hospital

## REFERRING VET

Dr. Rotella

## INVOICE

28226

## DATE

1/10/23

## PRESENTING CLINICAL SIGNS

History: Grade 2-3 systolic murmur. Chronic cough; suspect asthma on x-ray. Assess prior to dental.

## ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and doppler imaging is available. The left ventricular wall is irregular with focal septal thickening; however, the remainder appears normal. There is a mildly hyperechoic endocardium consistent with fibrosis. The papillary muscles are mildly hyperechoic. The left atrium is normal in size. The right atrium is normal in size. The right ventricle appears normal. The mitral valve is normal with trivial MR. No TR. Blood flow through the RVOT is normal. The blood flow through the LVOT is normal on doppler; however, color flow imaging suggest an intermittent LVOTO. No AI. Aortic root is prominent. No pleural or pericardial effusion seen. No obvious cardiac tumors

## CARDIAC CHART

FELINE CARDIAC PARAMETERS	BODY WEIGHT (kg)	HR (BPM)	IVSd (cm) (Moise, Pipers)	LVIDd (cm) (Moise, Pipers)	LWVd (cm) (Moise, Pipers)	FS (%)	EF (%)
NORMAL PARAMETER	-----	150-240	0.35-0.55	<2 (mean 1.5)	3.5-0.55	35-67	80-100
PATIENT	6.1	180	0.64	1.5	0.52	58	90
FELINE CARDIAC PARAMETERS	LA/AO (Boon)	LA/AO HEART BASE (Swe) (Abbott)	LA 2D short axis Base view (cm) (Abbott)		LVOT VEL (m/s)	RVOT VEL (m/s)	E max (m/s)
NORMAL	<1.5	<1.3	<1.2		<1.6	<1.3	<0.9
PATIENT	1.2	1.1	1.3		1.0	0.8	NM

*\*Note: All measurements based upon multi-modal images and methods. An average value is reported.*

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The primary abnormality identified is focal septal hypertrophy with LV remodeling, which may be indicative of early hypertrophic disease or may simply represent a normal variant. The LA is normal which would indicate clinical stability. Serial echocardiography will be necessary to determine progression and clinical significance. Additionally, there is suspicion of a mild LVOT obstruction, which appears intermittent and does not warrant therapy. Finally, the aortic root is prominent and the blood pressure should be assessed. No additional issues are identified.

Anesthetic risk is considered mild, however judicious IV fluid rates are advised to avoid fluid overload. Additionally, drugs that stimulate heart rate should be avoided unless clinically necessary (glycopyrrolate, atropine). Avoid vasodilators as this may worsen the obstruction. A reasonable protocol includes opioid/benzodiazepine premedication, propofol induction, isoflurane maintenance. Additionally, steroids should be used with caution on older cats, as even a 'normal' geriatric heart can develop evidence of intolerance and fluid retention.

Monitor for any development of clinical signs, including labored breathing or signs of a blood clot (paralysis, neurologic change). Prognosis is guarded prior to assessing for progression.

**PATIENT**

Guinness Soutar

A recheck echocardiogram is recommended in 6-12 months to screen for any evidence of progression.
