Grade III/VI murmur.

ECHOCARDIOGRAPHIC FINDINGS

2D, M-mode, and Doppler study.

Left atrial size is normal. The mitral valve appears normal, though mild mitral regurgitation is present. Left ventricular wall thickness is normal. Left ventricular internal dimensions are normal. Left ventricular systolic function is hyperdynamic. The aorta and aortic valve are normal. Right atrial and right ventricular dimensions are normal. The tricuspid valve is normal. The pulmonary artery and pulmonic valve are normal. No shunting lesions are visualized. No pericardial effusion or cardiac masses are seen.

ASSESSMENT/RECOMMENDATIONS

This examination demonstrates mild regurgitation of blood across Kiki's mitral valve. The hemodynamic effects of the regurgitation also appear to be mild, as Kiki does not have secondary dilation of either of her left heart chambers. As such, Kiki's current risk for the development of left-sided congestive heart failure and/or thromboembolic disease appears to be low.

No therapy is recommended based on this exam.

A recheck echocardiogram is recommended in 9 months, sooner if new clinical signs compatible with cardiac dysfunction (ex. labored breathing, collapse, limb paralysis) develop.
