PRESENTING CLINICAL SIGNS

History: Presented for not eating, picky, small amount of weight loss. PE: Irregular beat-extra beats. Small heart; vertebral heart score of 6.7. No murmur auscultated. No cough.
-Abnormal PE/Chem/CBC/UA Results (7/22): ProBNP 498. (1/22): ProBNP 1423.

RADIOGRAPHIC FINDINGS *NOTE: Images submitted for supplemental cardiac information only.
Microcardia. No obvious evidence of CHF.

ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and doppler imaging is available. Mild diffuse thickening of mitral valve leaflets with no prolapse into the left atrial lumen. No mitral regurgitation with no left atrial dilation. Normal LV diameter with adequate myocardial function. The tricuspid valve appears normal with no tricuspid regurgitation. Normal right atrial and ventricular diameter and morphology indicating no overt evidence of pulmonary arterial hypertension. The pulmonic and aortic valves are normal in morphology and mobility. Normal pulmonic and aortic outflow velocities with laminar flow. No obvious aortic or pulmonic insufficiency. No pericardial or pleural effusion noted. No obvious cardiac masses.

CARDIAC CHART

CANINE CARDIAC PARAMETERS	MR VMAX (m/s)	TR VMAX (m/s)	LA/AO (Boon method)	LA/AO (Heart Base; Swe)	FS (%)	EF (%)	EPSS (cm)
NORMAL PARAMETER	4.5-5.5	<2.7	1.3	<1.6	28-40	40-100	<0.6
PATIENT	NA	NA	1.3	1.1	56	88	NM

				50	2.88 (7.1)	6.07 (8.3)	4.46 (7.4)

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The cardiac structure and function in this patient is overtly normal. No significant valvular regurgitation is noted, and the cardiac dimensions and function are normal.

No obvious cause for microcardia is seen here. Highly recommend lab work, blood pressure, etc. for further evaluation. If no abnormalities are seen, referral for advanced imaging is suggested for

PATIENT

Roxy Pate

further evaluation. An arrhythmia is also noted on exam and cannot be commented on. An ECG is strongly recommended.

SPECIES

Canine

No obvious reason for NT-ProBNP elevation is seen, most likely making this a false positive result (a known weakness of the test). Other possible causes should be considered, including hypertension or renal disease. If no obvious cause is identified, reassessing this patient in 6-12 months is recommended to ensure early disease was not missed.

BREED

Mix

No cardiac medications are indicated at this time. Monitor for development of a cough, labored breathing, exercise intolerance or collapse episodes.

SEX

Female Spayed

No cardiac contraindication for general anesthesia.

A recheck is recommended in 6-12 months to ensure no progressive issues are identified, sooner should a murmur or any clinical signs of cardiac compromise be noted at home.
