

PATIENT

Dan Feeney

PRESENTING CLINICAL SIGNS

History: Primary DVM reports this is a workup for possible early right sided heart failure.
Labs (2021): NSF

SPECIES

Canine

RADIOGRAPHIC FINDINGS *NOTE: Images submitted for supplemental cardiac information only.
8/2021: Normal cardiac silhouette. No obvious evidence of CHF.

BREED

Englih Cocker Spaniel

ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and doppler imaging is available. Normal mitral valve leaflets with no prolapse into the left atrial lumen. Trivial mitral regurgitation with a normal left atrial dimension. Normal LV diameter with adequate myocardial function. The tricuspid valve appears normal with no tricuspid regurgitation. Normal right atrial and ventricular diameter and morphology indicating no overt evidence of pulmonary arterial hypertension. The pulmonic and aortic valves are normal in morphology and mobility. Normal pulmonic and aortic outflow velocities with laminar flow. No obvious aortic or pulmonic insufficiency. No pericardial or pleural effusion noted. No obvious cardiac masses.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Overtly normal cardiac dimensions and function, with no obvious dysfunction or dilation of the left heart. No significant valvular leaks are visualized, and no evidence of pulmonary hypertension. **No evidence of impending right-sided heart failure is identified in this study.**

INVOICE

26678

Monitor for development of a heart murmur, cough, labored breathing, exercise intolerance or collapse episodes.

DATE

PATIENT

Dan Feeney

A recheck echocardiogram is recommended should a significant murmur develop, or signs of cardiac compromise be noted in the future.
