PRESENTING CLINICAL SIGNS

History: Grade 2/6 murmur picked up on routine exam. Patient given short term GA for scan butorphanol, midazolam and alfaxone.

ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and doppler imaging is available. The left ventricular wall is normal in dimension. There is a diffusely hyperechoic endocardium consistent with fibrosis. The papillary muscles are mildly remodeled and hyperechoic. The endocardium also appears remodeled. The left atrium is normal in size. The right atrium is normal in size. The right ventricle appears normal. The mitral valve is normal in structure and mobility. Blood flow through both the LVOT and RVOT is normal in velocity. No obvious congenital defects. No pleural or pericardial effusion seen. No obvious cardiac tumors.

CARDIAC CHART

FELINE CARDIAC PARAMETERS	BODY WEIGHT (kg)	HR (BPM)	IVSd (cm) (Moise, Pipers)	LVIDd (cm) (Moise, Pipers)	LWVd (cm) (Moise, Pipers)	FS (%)	EF (%)
NORMAL PARAMETER	-----	150-240	0.35-0.55	<2 (mean 1.5)	3.5-0.55	35-67	80-100
PATIENT	2.4	188	0.44	1.2	0.43	46	81
FELINE CARDIAC PARAMETERS	LA/AO (Boon)	LA/AO HEART BASE (Swe) (Abbott)	LA 2D short axis Base view (cm) (Abbott)		LVOT VEL (m/s)	RVOT VEL (m/s)	E max (m/s)
NORMAL	<1.5	<1.3	<1.2		<1.6	<1.3	<0.9
PATIENT	NM	1.2	0.9		0.95	0.63	NM

**Note: All measurements based upon multi-modal images and methods. An average value is reported.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Overtly normal cardiac structure and function. The LV wall thickness is normal and there is no evidence of elevated left atrial pressure. There is mild remodeling and fibrosis of the left ventricular wall, which is more than suspected in a young kitten, follow up may be reasonable. Serial echocardiography will be necessary to determine progression. Finally, no cause for the murmur is identified in this study, making it likely physiologic in origin (i.e., secondary to tachycardia, volume changes, etc.) potentially masked by sedation. That being said, it is important to note that small abnormalities are easily missed, particularly in juvenile patient. If the murmur persists or progresses as the kitten ages, referral to a local Cardiologist for advanced imaging would be reasonable.

Given these findings, no medications are indicated.

No cardiac contraindication for general anesthesia.

Assuming the murmur persists, consider referral as discussed. If declined, recheck echocardiogram in 6-12 months to reassess murmur origin.
