

PATIENT

Paisley Roshuk

PRESENTING CLINICAL SIGNS

History: Heart murmur, grade 3/6 picked up on exam. On Grain free diet. Given butorphanol for scan. Nonclinical. Not on any medications

SPECIES

Canine

ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and doppler imaging is available. Normal mitral valve leaflets with no prolapse into the left atrial lumen. Trivial mitral regurgitation with mild left atrial dilation. Normal LV diameter with adequate myocardial function. Normal LV wall dimensions with no obvious hypertrophy. The tricuspid valve appears normal with no tricuspid regurgitation. Normal right atrial and ventricular diameter and morphology indicating no overt evidence of pulmonary arterial hypertension. The pulmonic valve appears normal in morphology and mobility. Normal pulmonic outflow velocities with laminar flow. Mild thickening of the aortic valve; mildly increased LVOT velocity consistent with stenosis. Trace aortic insufficiency. No pericardial or pleural effusion noted. No obvious cardiac masses.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The cause of the murmur is mild aortic stenosis due to a thickened aortic valve. No obvious subaortic ridge is visualized. The mildly increased PG and normal LV wall thickness indicates the disease is likely of minimal clinical significance and prognosis is good. A small aortic leak is identified, and a baseline BP is recommended every 6-12 months lifelong. The systolic function appears adequate; however, a diet change remains the conservative recommendation. No additional issues are identified.

PATIENT

Paisley Roshuk

No cardiac medications are indicated at this time. From a cardiac standpoint, monitor for development of collapse episodes, labored breathing or exercise intolerance, as AS patients are more predisposed to development of arrhythmias than to CHF (particularly Boxers and Bulldogs).

SPECIES

Canine

Anesthetic risk is low. Avoid heart rate stimulating drugs such as atropine or glycopyrrolate unless clinically indicated. Recommend prophylactic antibiotics for any orthopedic or dental procedure in the future given slight predisposition to endocarditis.

BREED

Boxer

Recommend recheck echocardiogram in 1 year to confirm no progression is seen, and to screen for development of concurrent cardiac disease that the preexisting murmur may mask.
