PRESENTING CLINICAL SIGNS

History: Recheck echo. Has asthma and coughing spells. Flovent inhaler daily. Assess prior to steroids.
-Pertinent previous echo findings (4/2025 MML): borderline LVH (0.55cm); remainder NSF

ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and doppler imaging is available. The left ventricular wall is irregular with borderline dimensions overall. There is a mildly hyperechoic endocardium consistent with fibrosis. The papillary muscles are mildly remodeled and hyperechoic. The left atrium is normal in size. The right atrium is normal in size. The right ventricle appears normal. The mitral valve is normal in structure and mobility. No MR or TR. Blood flow through both the LVOT and RVOT is normal in velocity. No pleural or pericardial effusion seen. No obvious cardiac tumors.

CARDIAC CHART

FELINE CARDIAC PARAMETERS	BODY WEIGHT (kg)	HR (BPM)	IVSd (cm) <small>(Moise, Pipers)</small>	LVIDd (cm) <small>(Moise, Pipers)</small>	LVWd (cm) <small>(Moise, Pipers)</small>	FS (%)	EF (%)
NORMAL PARAMETER	-----	150-240	0.35-0.55	<2 (mean 1.5)	3.5-0.55	35-67	80-100
PATIENT	5.6	NM	0.57	1.4	0.58	50	84
FELINE CARDIAC PARAMETERS	LA/AO <small>(Boon)</small>	LA/AO HEART BASE (Swe) <small>(Abbott)</small>	LA 2D short axis Base view (cm) <small>(Abbott)</small>		LVOT VEL <small>(m/s)</small>	RVOT VEL <small>(m/s)</small>	E max <small>(m/s)</small>
NORMAL	<1.5	<1.3	<1.2		<1.6	<1.3	<0.9
PATIENT	1.4	1.3	1.2		1.1	1.3	NM

**Note: All measurements based upon multi-modal images and methods. An average value is reported.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Persistently stable findings. The LV wall thickness is unchanged, which likely suggests a normal variant, given stability across serial exams. The LA is normal, and no additional issues have developed.

Given these findings, the cough remains noncardiogenic in origin. No medications are indicated.

Anesthetic risk is mild; however, any cat may be at risk for iatrogenic IV fluid overload should they be needed in the future. No obvious contraindication for steroid use at this time.

Monitor for any development of clinical signs, including labored breathing or signs of a blood clot (paralysis, neurologic change).

A recheck echocardiogram is recommended in 1 year to screen for any evidence of progression.
