HOLTER MONITOR FINDINGS AND RHYTHM ASSESSMENT

Time analyzed	23:49h
Mean heart rate	72bpm
Maximum heart rate	284bpm
Minimum heart rate	38bpm
VPCs	6 singles
APCs	0

Interpretation: Normal sinus rhythm with appropriate rate variation. Rare (6) single VPCs are seen, which are essentially a normal finding for a 24 hour recording. Occasional sinus pauses while sleeping/bradycardic. Max HR is supraventricular in origin and occurs with excitement (car ride).

Rhythm diagnosis: Normal sinus rhythm with rare isolated VPCs (6).

WEIGHT

111 lbs

RECOMMENDATIONS

Essentially normal recording. The VPC count is considered normal for a 24 hour period, and the VPCs are monomorphic without markers of malignancy. No significant extra-nodal tachycardias are noted, and no malignant arrhythmias identified. The HR is appropriate as compared to the diary.

No medications are indicated at this time. No evidence of arrhythmogenic form of DCM.

Recheck annually, sooner if clinical signs such as syncope arise.
