## PRESENTING CLINICAL SIGNS

History: New grade 5/6 heart murmur. Getting treatment for a wound over the muzzle; Started losing weight, getting loose stool, and becoming inappetent. HWT negative; TT4 2.2mg/dl; ALT slightly elevated (145 IU/L); All other CBC/Chem findings normal. HCT at time of echo is 45%.

## ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and doppler imaging is available. Mild mitral valve leaflet thickening with no obvious prolapse into the left atrial lumen. Trace mitral regurgitation is identified. Normal left atrial dimension. Normal LV diameter with normal myocardial function. The tricuspid valve appears subjectively normal. No TR. The right heart is normal. No overt evidence of pulmonary arterial hypertension. The pulmonic and aortic valves are normal in morphology and mobility. No aortic abnormalities identified, with normal outflow velocity. Normal pulmonic outflow velocities. No aortic insufficiency. Trace pulmonic insufficiency. No pericardial or pleural effusion noted. No cardiac tumors observed.

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Overtly normal cardiac structure and function with no cause of a murmur identified. No significant valvular insufficiencies were noted and no structural issues identified. In the absence of significant volume changes (dehydration or anemia), other possibilities include a physiologic flow murmur only present with elevated heart rates, or a small flow abnormality not seen here. Should the murmur persist/progress in the future, it is reasonable to monitor periodically via recheck echocardiography in the future.

It is worth noting that a grade 5 murmur is always concerning, particularly if the origin remains non-diagnosed. Consider referral if the murmur persists with such intensity.

## PATIENT

Macaroni Dhonau

No cardiac medications are indicated at this time. Prognosis is open. Monitor for any development of cough, labored breathing or exercise intolerance.

## SPECIES

Canine

No cardiac contraindication for general anesthesia.

## BREED

Hound Mix

Recommend recheck echocardiogram in 12-18 months to reassess murmur origin and screen for development of concurrent cardiac disease that the preexisting murmur may mask.
