

PRESENTING CLINICAL SIGNS

History: Respiratory distress. Echo pending. Receiving furosemide and enalapril.

DATE

12/14/21

ELECTROCARDIOGRAPHIC FINDINGS

A single lead ECG is submitted for review.

HR: 200 bpm

Rhythm: Sinus tachycardia

PERFORMED BY:

Rachel Runnells, RVT

Sinus tachycardia is present throughout this recording. All complex amplitudes and intervals are within normal limits. No premature beats or conduction blocks are seen.

INTERPRETED BY

Keith Blass, DVM,
MS, DACVIM
(Cardiology)

ASSESSMENT/RECOMMENDATIONS

Archie's ECG demonstrates the presence of a sinus tachycardia, which could be due to a combination of stress/anxiety and congestive heart failure, if present.

Archie's sinus tachycardia should resolve once its underlying cause(s) is/are treated, therefore, antiarrhythmic therapy does not appear to be warranted.

PATIENT

Archie Brancato

A recheck ECG is recommended if new physical exam and/or clinical abnormalities suggestive of the presence of an arrhythmia develop.

SPECIES

Canine

BREED

Shih Tzu

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
