PRESENTING CLINICAL SIGNS

History: Cough lasting 1 year. Concern for feline asthma. Treated for lungworms. Feline respiratory panel positive for Mycoplasma- treated with Zeniquin; cough stopped for two months and has returned with lesser frequency. Sedated with Torb, Alfaxalone and Midazolam.

ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and doppler imaging is available. The left ventricular wall is normal in dimension. The endocardium appears normal. The papillary muscles are normal in size and architecture. The left atrium is normal in size. The right atrium is normal in size. The right ventricle appears normal. The mitral valve is normal in structure and mobility. No MR seen. Normal flow through both the RVOT and LVOT. Trace TR. No AI. Trace PI. No congenital defects are observed. No pleural or pericardial effusion seen. No obvious cardiac tumors.

CARDIAC CHART

FELINE CARDIAC PARAMETERS	BODY WEIGHT (kg)	HR (BPM)	IVSd (cm) (Moise, Pipers)	LVIDd (cm) (Moise, Pipers)	LVWd (cm) (Moise, Pipers)	FS (%)	EF (%)
NORMAL PARAMETER	-----	150-240	0.35-0.55	<2 (mean 1.5)	3.5-0.55	35-67	80-100
PATIENT	3.9	166	0.45	1.2	0.40	35	68
FELINE CARDIAC PARAMETERS	LA/AO (Boon)	LA/AO HEART BASE (Swe) (Abbott)	LA 2D short axis Base view (cm) (Abbott)		LVOT VEL (m/s)	RVOT VEL (m/s)	E max (m/s)
NORMAL	<1.5	<1.3	<1.2		<1.6	<1.3	<0.9
PATIENT	1.2	1.2	1.0		0.5	0.5	NM

**Note: All measurements based upon multi-modal images and methods. An average value is reported.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Overtly normal cardiac structure and function. The LV wall thickness is normal and there is no evidence of elevated left atrial pressure. No significant valve leaks are identified, and flow through the great vessels is normal. No obvious congenital issues are documented.

These findings would certainly suggest the cough is noncardiogenic in origin. Follow up and treatment should be dictated by the CXR report.

Given these findings, no medications are indicated. It is important to note that phenotypic HCM can develop at any phase of life in cats (particularly in this predisposed breed) and often does not accompany a heart murmur or PE abnormalities. Periodic screening is ideally recommended in all cats.

No cardiac contraindication for breeding or general anesthesia at this time.

Recommend recheck echocardiogram in 1 year to assess for development of disease, sooner if a murmur/gallop or clinical signs develop in the interim.
