

**PATIENT**

Jack Royle

**SPECIES**

Feline

**BREED**

DSH

**SEX**

Male Neutered

**AGE**

5 years

**WEIGHT**

13.1lbs

**INTERPRETED BY**

Maggie Machen Lamy,  
 DVM DACVIM  
 (Cardiology)

**IMAGING PERFORMED BY**

Kelly Reschny, RVT

**HOSPITAL NAME**

East Credit Veterinary  
 Hospital

**REFERRING VET**

Dr. Jerabek

**INVOICE**

45953

**DATE**

12/2/25

**PRESENTING CLINICAL SIGNS**

History: Grade 1-2/6 heart murmur (more audible at higher HRs). FIV positive. Assess prior to dental.

**ECHOCARDIOGRAM FINDINGS**

2D, m-mode, color flow and doppler imaging is available. The left ventricular wall is normal in dimension. There is a mildly hyperechoic endocardium. The papillary muscles are normal in size. The endocardium appears normal. The left atrium is normal in size. The right atrium is normal in size. The right ventricle appears normal. The mitral valve is normal in structure and mobility. Normal flow through both the RVOT and LVOT. No MR or TR. No AI or PI. No pleural or pericardial effusion seen. No obvious cardiac tumors.

**CARDIAC CHART**

FELINE CARDIAC PARAMETERS	BODY WEIGHT (kg)	HR (BPM)	IVSd (cm) (Moise, Pipers)	LVIDd (cm) (Moise, Pipers)	LVWd (cm) (Moise, Pipers)	FS (%)	EF (%)
NORMAL PARAMETER	-----	150-240	0.35-0.55	<2 (mean 1.5)	3.5-0.55	35-67	80-100
PATIENT	5.9	130	0.45	1.2	0.47	58	92
FELINE CARDIAC PARAMETERS	LA/AO (Boon)	LA/AO HEART BASE (Swe) (Abbott)	LA 2D short axis Base view (cm) (Abbott)	LVOT VEL (m/s)	RVOT VEL (m/s)	E max (m/s)	
NORMAL	<1.5	<1.3	<1.2	<1.6	<1.3	<0.9	
PATIENT	1.2	1.3	1.2	1.0	1.1	NM	

*\*Note: All measurements based upon multi-modal images and methods. An average value is reported.*  
 Adapted from June Boon, Veterinary Echocardiography, 1998

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Overtly normal cardiac structure and function. The LV wall thickness is normal and there is no evidence of elevated left atrial pressure. No significant valve leaks are appreciated and flow through the great vessels is normal. These findings would suggest the murmur is likely physiologic in origin.

Given these findings, no medications are indicated. It is important to note that phenotypic HCM can develop at any phase of life in cats and periodic screening is ideally recommended.

No cardiac contraindication for general anesthesia at this time.

Recommend recheck echocardiogram in 1 year to assess for development of disease, sooner if clinical signs develop in the interim.
