ASSESSMENT/RECOMMENDATIONS

SPECIES

Normal echocardiogram

Feline

This examination demonstrates no evidence of structural heart disease. While a definitive reason for Mobs' murmur was not identified, it's likely that his murmur is functional/innocent in nature, as no flow abnormalities that could result in the development of a pathologic murmur were appreciated in the image set.

BREED

DSH

No therapy is recommended based on this exam.

SEX

A recheck echocardiogram is recommended if the characteristics of Mobs' murmur change, or if other new physical exam and/or clinical abnormalities suggestive of cardiac dysfunction develop.
