

**PATIENT**

Percy Brainard

**SPECIES**

Canine

**BREED**

Chihuahua

**SEX**

Male Intact

**AGE**

12 years

**WEIGHT**

7.6lbs

**INTERPRETED BY**

Maggie Machen  
Lamy, DVM  
DACVIM (Cardiology)

**IMAGING PERFORMED BY**

Pamela Harrigan,  
RDCS

**HOSPITAL NAME**

Mass Veterinary Services

**REFERRING VET**

Dr. Masloski

**INVOICE**

27839

**DATE**

12/6/22

**PRESENTING CLINICAL SIGNS**

History: Recheck echo. History chronic valvular disease - stage B1. Presently, Percy is doing well with a good appetite and activity level. He has an occasional cough. On exam: NSR, grade II/VI murmur with PMI left apical area, PSS, lung fields clear, mm pink, moist BP: 120-130mmHg. \*No sedation for study.  
-Pertinent previous echo findings (6/1/21 MML): LA 1.3 cm; LA:Ao 1.1; LV 1.75 cm; normal LA/LV size; mild MR; trace TR.

**ECHOCARDIOGRAM FINDINGS**

2D, m-mode, color flow and Doppler imaging is available.

**Left ventricle:** The LV diameter is normal with adequate myocardial function. LV wall thicknesses are normal.

**Left atrium:** The left atrium is normal.

**Mitral valve:** The mitral valve is diffusely thickened with mild prolapse into the left atrial lumen. Mild central mitral regurgitation.

**Aortic valve/Aorta:** The aortic valve is normal in morphology and mobility. Normal aortic outflow velocity; laminar flow. No aortic insufficiency.

**Right ventricle:** Normal right ventricular diameter and morphology indicating no overt evidence of pulmonary arterial hypertension.

**Right atrium:** Normal RA dimension.

**Tricuspid valve:** The tricuspid valve appears normal with no tricuspid regurgitation.

**Pulmonic valve/Pulmonary artery:** The pulmonic valve is normal in morphology and mobility. No pulmonic insufficiency. Normal RVOT velocity; laminar flow.

**Pericardium/other:** No pericardial or pleural effusion noted. No obvious cardiac masses.

**Heart rhythm:** ECG reveals a sinus rhythm with an average HR of 120bpm.

**2-Dimensional Measurements**

Ao diam (cm)	1.4
LA diam (cm)	1.5
LA:Ao (Swe)	1.1
IVS thickness (cm)	0.5
LVID diastole (cm)	2.2
PW thickness (cm)	0.5
LVID systole (cm)	1.2
FS (%)	45

**Doppler Measurements**

PV Vmax (m/s)	0.7
AoV Vmax (m/s)	1.2
MR Vmax (m/s)	5.7
TR Vmax (m/s)	NA
TR PG (mmHg)	NA

**INTERPRETATION OF THE FINDINGS**

Chronic degenerative valve disease persists with overall stability. Mild mitral regurgitation is unchanged with slight progression in left heart dimensions. The disease remains safely within the mild category. No additional issues are identified.

Continued assessment of progression in the future will help predict long term prognosis, which remains highly variable at this stage (B1).

**RECOMMENDATIONS**

- No cardiac medications are clearly indicated.
- Omega fatty acid supplementation and mild salt restriction may be of some long-term benefit.
- Anesthetic risk is considered mild if needed. Cardiac protective drug choices (opioid/benzodiazepine premedication, propofol or alfaxalone induction, isoflurane gas) are recommended. Pre-oxygenate for 5-10 minutes prior to induction. Monitor for arrhythmias, hypotension, and hypoxia both intra and post-operatively and intervene as necessary. Mild IV fluid restriction is recommended to avoid fluid overload. Avoid heart rate stimulating drugs such as atropine unless clinically indicated.
- Monitor for development of a cough, labored breathing, exercise intolerance or collapse episodes.

**PLAN**

- Recommend conservative monitoring with a recheck echocardiogram in 6-12 months, sooner if any development of clinical signs.

**IMAGES**

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. This report was generated using transcription software, and minor dictation errors may be present. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance, please contact me.
