

PRESENTING CLINICAL SIGNS

DATE History: Presented earlier this month with dyspnea. Radiographs showed possible cranial lung pulmonary edema and a bronchial pattern that could be consistent with asthma. Given a few doses of furosemide and dyspnea resolved. Recheck radiographs on 2/10 showed no edema but still suspicious for asthma. No murmur. Currently receiving furosemide 6.25 mg BID.

2/15/23

ECHOCARDIOGRAPHIC FINDINGS

2D, M-mode, and Doppler study.

PERFORMED BY

Dr. Meredith Swart

INTERPRETED BY

Keith Blass, DVM,
MS, DACVIM
(Cardiology)

Left atrial size is normal. The mitral valve is normal. Left ventricular wall thickness is normal. Left ventricular internal dimensions are normal. Left ventricular systolic function is normal. The aorta and aortic are normal. Right atrial and right ventricular dimensions are normal. The tricuspid valve is normal. The pulmonary artery and pulmonic valve are normal. No pericardial effusion or cardiac masses are seen.

PATIENT

Blink Kavet

LA/Ao – 1.24
IVSd – 4.9 mm
LVPWd – 4.3 mm
LVIDd – 14.2 mm
LVIDs – 7.7 mm
FS – 45.8%
RA – 15.7 mm
LVOT – 1.14 m/s
RVOT – 1.11 m/s

SPECIES

Feline

ASSESSMENT/RECOMMENDATIONS

Normal echocardiogram

BREED

This examination demonstrates no evidence of structural heart disease. While I haven't seen Blink's radiographs, the absence of abnormalities in this exam suggests that his dyspnea was not cardiogenic in origin.

DSH

SEX

No therapy is recommended based on this exam, and it's likely that Blink's furosemide can be tapered and discontinued.

MN

A recheck echocardiogram is recommended if new physical exam and/or clinical abnormalities suggestive of the presence of cardiac dysfunction develop.
