

**PATIENT**

Bob Messing

**PRESENTING CLINICAL SIGNS**

History: Disoriented and unbalanced walking at home. Has a history of marijuana toxicity.  
-Sedation: 0.3ml of Torb.

**SPECIES**

Canine

**ECHOCARDIOGRAM FINDINGS**

2D, m-mode, color flow and doppler imaging is available. Normal mitral valve leaflets with no prolapse into the left atrial lumen. No obvious mitral regurgitation with a normal left atrial dimension. Normal LV diameter with adequate myocardial function. The tricuspid valve appears normal with no tricuspid regurgitation. Normal right atrial and ventricular diameter and morphology indicating no overt evidence of pulmonary arterial hypertension. The pulmonic and aortic valves are normal in morphology and mobility. Normal pulmonic and aortic outflow velocities with laminar flow. No obvious aortic or pulmonic insufficiency. No pericardial or pleural effusion noted. No obvious cardiac masses.

**BREED**

Yorkie

**SEX**

Male Neutered

				50	2.88 (7.1)	6.07 (8.3)	4.46 (7.4)

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Overtly normal cardiac dimensions and function, with no obvious dysfunction or dilation of the left heart. No significant valvular leaks are visualized, and no evidence of pulmonary hypertension.

These findings would suggest an extra-cardiac origin of the current clinical signs. A baseline ECG and BP are recommended in light of the reported ataxia.

Monitor for development of a heart murmur, cough, labored breathing, exercise intolerance or collapse episodes.

**PATIENT**

Bob Messing

A recheck echocardiogram is recommended should a significant murmur develop, or signs of cardiac compromise be noted in the future.
