PRESENTING CLINICAL SIGNS

New murmur. BNP WNL. Pre-anesthetic evaluation (dental).

ECHOCARDIOGRAPHIC FINDINGS

2D, M-mode, and Doppler study.

Left atrial size is normal. The mitral valve is normal. Left ventricular wall thickness is normal. Left ventricular internal dimensions are normal. Left ventricular systolic function is hyperdynamic. The aorta and aortic valve are normal. Right atrial and right ventricular dimensions are normal. The tricuspid valve appears normal, though trace tricuspid regurgitation is present. The pulmonary artery and pulmonic valve are normal. No pericardial effusion or cardiac masses are seen.

LVIDs - 4.8 mm

FS - 61.3%

LVOT - 0.76 m/s

RVOT - 1.04 m/s

ASSESSMENT/RECOMMENDATIONS

Normal echocardiogram

This examination demonstrates no evidence of structural heart disease, as trace tricuspid regurgitation can be considered a normal physiologic variant.

No therapy is recommended based on this exam, and there is no contraindication to general anesthesia.

A recheck echocardiogram is recommended if the characteristics of Ebony's murmur change, or if other new physical exam and/or clinical abnormalities suggestive of cardiac dysfunction develop.

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not
