

PATIENT

Leroy Kennedy

PRESENTING CLINICAL SIGNS

 History: Anxious; HR around 160bpm. Muffled heart sound. No murmur. Pale mm.
 -Current medications: Vetmedin, furosemide, Fortekor.
 -Abnormal PE/Chem/CBC/UA Results: Elevated WBC's, Neutrophils, Monocytes and Lymphocytes.

SPECIES

Canine

ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and doppler imaging is available. Normal mitral valve leaflets with no prolapse into the left atrial lumen. No obvious mitral regurgitation with a normal left atrial dimension. Normal LV diameter with adequate myocardial function. The tricuspid valve appears normal with no tricuspid regurgitation. Normal right atrial and ventricular diameter and morphology indicating no overt evidence of pulmonary arterial hypertension. The pulmonic and aortic valves are normal in morphology and mobility. Normal pulmonic and aortic outflow velocities with laminar flow. Mild aortic and no pulmonic insufficiency. No pericardial or pleural effusion noted. No obvious cardiac masses.

BREED

French Bulldog

SEX

Male Neutered

AGE

13 years

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Overtly normal cardiac dimensions and function, with no obvious dysfunction or dilation of the left heart. A small aortic leak is noted, and a baseline BP is recommended. No other significant valvular leaks are visualized, and no evidence of pulmonary hypertension.

 These findings would suggest that muffled heart sounds is a normal anatomic variant. Consider baseline CXR to ensure on pulmonary issues are present. **No indication for continued cardiac medications.**

PATIENT

Leroy Kennedy Monitor for development of a heart murmur, cough, labored breathing, exercise intolerance or collapse episodes.

SPECIES

Canine A recheck echocardiogram is recommended should a significant murmur develop, or signs of cardiac compromise be noted in the future.
