PRESENTING CLINICAL SIGNS

History: Presented to evaluate cardiomegaly. Presented to rDVM on 1-25-23 to evaluate cough. Auscultation showed normal heart sounds, but some wheezing. Presented with the same chief complaint since July 2021 and pt improved with the medication they sent home. Thoracic radiographs were sent and showed cardiomegaly. Patient is on furosemide, prednisone and doxycycline. -Abnormal PE/Chem/CBC/UA Results: CBC: HCT: 67 (37-55), MCH 27 (19-24), MCHC: 36 (31-34), WBC normal.

ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and doppler imaging is available. Normal mitral valve leaflets with no prolapse into the left atrial lumen. Trivial mitral regurgitation with no left atrial dilation. Normal LV diameter with adequate myocardial function. The tricuspid valve appears normal with trivial tricuspid regurgitation. Normal right atrial and ventricular diameter and morphology indicating no overt evidence of pulmonary arterial hypertension. The pulmonic and aortic valves are normal in morphology and mobility. Normal pulmonic and aortic outflow velocities with laminar flow. No obvious aortic or pulmonic insufficiency. No pericardial or pleural effusion noted. No obvious cardiac masses.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Overtly normal cardiac dimensions and function, with no obvious dysfunction or dilation of the left heart. No significant valvular leaks are visualized, and no evidence of pulmonary hypertension. It worth mentioning that image quality is challenging in this case, likely due to pulmonary infiltrate. Small abnormalities may have been missed; however, no significant pathology is appreciated.

PATIENT

Kamala Cotto

These findings would suggest cardiomegaly is a normal radiographic variant. Consider reassess CXR once respiratory signs have resolved to reestablish a baseline in this young dog.

SPECIES

Canine

No cardiac medications are indicated at this time as the cough appears non-cardiac in origin and Lasix can be safely discontinued. Continued work up for infectious/inflammatory respiratory causes is recommended. Options include Baytril or similar antibiotic, anti-inflammatory prednisone, aggressive hydrocodone, etc. If refractory, may consider TTW/BAL for further information.

BREED

American Bulldog

Monitor for development of a heart murmur, cough, labored breathing, exercise intolerance or collapse episodes.

SEX

Female

Chronic respiratory issues can lead to pulmonary hypertension if poorly controlled and a recheck echocardiogram is recommended should any exertional syncope/dyspnea occur, or a murmur be noted in the future.
