**PRESENTING CLINICAL SIGNS**

History: Recheck echo. On Pimobendan and Enalapril.  
-Pertinent previous echo findings (11/2020 MML): mild/mod MR, mild LAE, normal LV, mod TR, 3.8m/s, LA 2.0, LV 2.8

**ECHOCARDIOGRAM FINDINGS**

2D, m-mode, color flow and doppler imaging is available. Diffuse thickening of mitral valve leaflets with mild prolapse into the left atrial lumen. Mild to moderate eccentric mitral regurgitation with moderate left atrial dilation. Normal MR velocity. Normal LV diameter with adequate myocardial function. The tricuspid valve appears mildly thickened with moderate tricuspid regurgitation. Velocity increased. Normal right atrial and ventricular diameter and morphology. The pulmonic and aortic valves are normal in morphology and mobility. Normal pulmonic and aortic outflow velocities with laminar flow. No obvious aortic or pulmonic insufficiency. No pericardial or pleural effusion noted. No obvious cardiac masses.

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Chronic valve disease persists with relative stability. The LA is increased compared to the 2020 study; however, remains in the moderate/B2 category. The LV/MR and TR are unchanged, with stable pulmonary pressures. No additional issues are identified.

Given these findings, no additional medications are warranted. Continue to monitor for progressive cough, labored breathing, exercise intolerance or collapse at home. Hydrocodone can be utilized for QOL if needed.

Anesthetic risk is considered mild if needed. Cardiac protective drug choices (opioid/benzodiazepine premedication, propofol or alfaxalone induction, isoflurane gas) are recommended. **Pre-oxygenate for 5-10 minutes prior to induction.** Monitor for arrhythmias, hypotension, and hypoxia both intra and post-operatively and intervene as necessary. Mild IV fluid restriction is recommended to avoid fluid overload. Avoid heart rate stimulating drugs such as atropine unless clinically indicated.

**PLAN**

Continue Pimobendan and ACEI as prescribed. Monitor BP q6 mo.

Recheck echocardiogram in 6 months, sooner if any clinical signs arise.
