

**PATIENT**

Greta Turkowsky

**PRESENTING CLINICAL SIGNS**

History: General geriatric screen, slowing down/ slightly lethargic, recheck liver changes (last AUS 2/17/21) No current medications.

**SPECIES**

Canine

**ECHOCARDIOGRAM FINDINGS**

2D, m-mode, color flow and doppler imaging is available. Normal mitral valve leaflets with no prolapse into the left atrial lumen. No obvious mitral regurgitation with a normal left atrial dimension. Normal LV diameter with adequate myocardial function. The tricuspid valve appears mildly thickened with mild tricuspid regurgitation. Normal velocity. Normal right atrial and ventricular diameter and morphology indicating no overt evidence of pulmonary arterial hypertension. The pulmonic and aortic valves are normal in morphology and mobility. Normal pulmonic and aortic outflow velocities with laminar flow. No obvious aortic or pulmonic insufficiency. No pericardial or pleural effusion noted. No obvious cardiac masses.

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Overtly normal cardiac dimensions and function, with no obvious dysfunction or dilation of the left heart. A small tricuspid leak is noted, which is likely physiologic in origin. Follow up is advised should a murmur develop. No other significant valvular leaks are visualized, and no evidence of pulmonary hypertension.

Monitor for development of a heart murmur, cough, labored breathing, exercise intolerance or collapse episodes.

**PATIENT**

Greta Turkowsky

A recheck echocardiogram is recommended should a significant murmur develop, or signs of cardiac compromise be noted in the future.
