

PATIENT

Zeus Lochner

PRESENTING CLINICAL SIGNS

History: Incidental finding of grade 2-3/6 left sided systolic murmur on wellness exam.
-Radiographs: VHS 11.0.

SPECIES

Canine

BREED

Labrador Retriever

ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and doppler imaging is available. Mild mitral valve leaflet thickening with no obvious prolapse into the left atrial lumen. Trivial mitral regurgitation is identified. Normal left atrial dimension. Normal LV diameter with normal myocardial function. The tricuspid valve appears subjectively normal. Trace TR. The right heart is normal. No overt evidence of pulmonary arterial hypertension. The pulmonic and aortic valves are normal in morphology and mobility. No aortic abnormalities identified, with normal outflow velocity. Normal pulmonic outflow velocities. No aortic insufficiency. No pulmonic insufficiency. No pericardial or pleural effusion noted. No cardiac tumors observed.

SEX

Male Intact

				40	2.62 (5.2)	5.48 (6.1)	3.96 (5.4)
				50	2.88 (7.1)	6.07 (8.3)	4.46 (7.4)

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Overtly normal cardiac structure and function with no cause of a murmur identified. Trace MR and TR are unlikely to be heard on exam and are considered physiologic at this stage. No other significant valvular insufficiencies were noted, and no structural issues identified. In the absence of significant volume changes (dehydration) or anemia, other possibilities include a physiologic flow murmur only present with elevated heart rates, or a small flow abnormality not seen here. It is reasonable to monitor periodically via recheck echocardiography in the future, particularly should the murmur persist/progress.

PATIENT

Zeus Lochner

These findings would suggest mild cardiomegaly on CXR is a normal variant. These should be used as a baseline for future comparison.

SPECIES

Canine

No cardiac medications are indicated at this time. Monitor for any development of cough, labored breathing or exercise intolerance.

BREED

Labrador Retriever

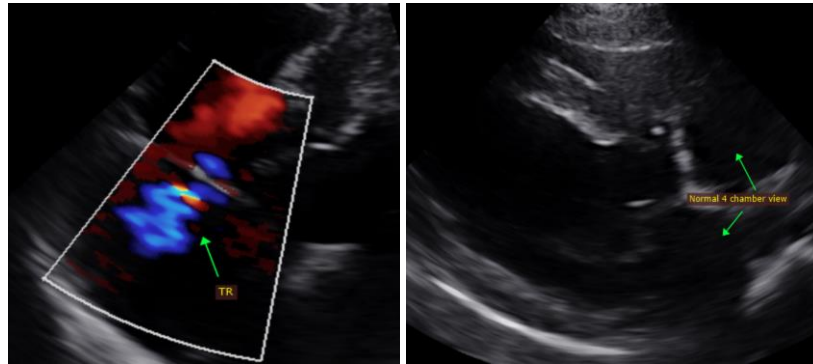

No cardiac contraindication for general anesthesia.

Recommend recheck echocardiogram in 12-18 months to screen for progression or development of concurrent cardiac disease that the preexisting murmur may mask.
