WEIGHT

8 lb

PRESENTING CLINICAL SIGNS

Grade 2/6 murmur. Pre-anesthetic evaluation (cystotomy).

ECHOCARDIOGRAPHIC FINDINGS

2D, M-mode, and Doppler study.

Left atrial size is normal. The mitral valve is normal. Left ventricular wall thickness is normal. Left ventricular internal dimensions are normal. Left ventricular systolic function is hyperdynamic. The aorta and aortic valve are normal. Right atrial and right ventricular dimensions are normal. The tricuspid valve appears normal, though trace tricuspid regurgitation is present. The pulmonary artery and pulmonic valve are normal. No shunting lesions are visualized. No pericardial effusion or cardiac masses are seen.

IVSd - 4.3 mm
LVPWd - 3.8 mm
LVIDd - 14.2 mm
LVIDs - 6.1 mm
FS - 57%
LVOT - 1.07 m/s
RVOT - 0.91 m/s

ASSESSMENT/RECOMMENDATIONS

Normal echocardiogram

INTERPRETED BY

Keith Blass, DVM, MS,
DACVIM (Cardiology)

This examination demonstrates no evidence of structural heart disease. While a definitive reason for Daiquiri's murmur was not identified, it's likely that his murmur is functional/innocent in nature, as no flow abnormalities that could result in the development of a pathologic murmur were appreciated in the image set.

IMAGING PERFORMED BY

Kerri Becker

No therapy is recommended based on this exam, and there is no contraindication to general anesthesia.

A recheck echocardiogram is recommended if the characteristics of Daiquiri's murmur change, or if other new physical exam and/or clinical abnormalities suggestive of cardiac dysfunction develop.

HOSPITAL NAME

Wyckoff VH

REFERRING VET

Dr. Eisenberg
