ASSESSMENT/RECOMMENDATIONS

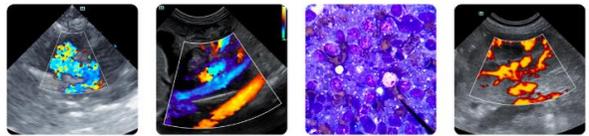

Normal echocardiogram

This examination demonstrates no evidence of structural heart disease. While a definitive reason for Pickles' murmur was not identified, it's likely that his murmur is functional/innocent in nature, as no flow abnormalities that could result in the development of a pathologic murmur were appreciated in the image set.

No therapy is recommended based on this exam.

A recheck echocardiogram is recommended if the characteristics of Pickles' murmur change, or if other new physical exam and/or clinical abnormalities suggestive of cardiac dysfunction develop.
