PRESENTING CLINICAL SIGNS

History: Panting at night. Lethargy. Weight gain. Vomiting. Decreased appetite. On Cerenia injection. Sedated with Propofol.

RADIOGRAPHIC FINDINGS *NOTE: Images submitted for supplemental cardiac information only.

Normal cardiac silhouette. No obvious evidence of CHF.

ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and doppler imaging is available. Mild MV thickening with no prolapse into the left atrial lumen. No obvious mitral regurgitation with a normal left atrial dimension. Normal LV diameter with adequate myocardial function. The tricuspid valve appears normal with no tricuspid regurgitation. Normal right atrial and ventricular diameter and morphology indicating no overt evidence of pulmonary arterial hypertension. The pulmonic and aortic valves are normal in morphology and mobility. Normal pulmonic and aortic outflow velocities with laminar flow. No obvious aortic and trace pulmonic insufficiency. No pericardial or pleural effusion noted. No obvious cardiac masses.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Overtly normal cardiac dimensions and function, with no obvious dysfunction or dilation of the left heart. No significant valvular leaks are visualized, and no evidence of pulmonary hypertension.

PATIENT

These findings would certainly suggest the clinical issues are noncardiogenic in origin.

Bali Perel

No medications are indicated and the prognosis is open from a cardiac standpoint.

SPECIES

Monitor for development of a heart murmur, cough, labored breathing, exercise intolerance or collapse episodes.

Canine

BREED

A recheck echocardiogram is recommended should a significant murmur develop or signs of cardiac compromise be noted in the future.
