DATE

4/27/26

PRESENTING CLINICAL SIGNS

History: Abel is presently eating well at home with good activity. Abel has tested positive for both markers for DCM. His echo was normal (MML 4-14-26).

DIARY: Included.

HOLTER MONITOR FINDINGS AND RHYTHM ASSESSMENT

Time analyzed	23:32h
Mean heart rate	55bpm
Maximum heart rate	203bpm
Minimum heart rate	29bpm
VPCs	0
APCs	0

Interpretation: Underlying normal sinus rhythm with appropriate rate variation. Max heart rate is sinus in origin and occurs with excitement (car ride). No VPCs or dysrhythmias are observed.

Rhythm diagnosis: Normal sinus rhythm.

RECOMMENDATIONS

Normal recording with no evidence of the arrhythmic form of DCM.

Annual monitoring is reasonable in a predisposed breed. Monitor for any acute lethargy or collapse lifelong. Routine monitoring for development of auscultable murmur or arrhythmias is also recommended.

IMAGES

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.
