

PATIENT

Maisie Sadowski

PRESENTING CLINICAL SIGNS

History: Recheck echo. Doing well.

-Pertinent previous echo findings (3/2022 MML): Mild MR, no LA or LVE. LA: 1.4, LV: 2.6.

SPECIES

Canine

ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and doppler imaging is available. Mild diffuse thickening of mitral valve leaflets with no prolapse into the left atrial lumen. Mild eccentric mitral regurgitation with no left atrial dilation. Normal LV diameter with adequate myocardial function. The tricuspid valve appears normal with no tricuspid regurgitation. Normal right atrial and ventricular diameter and morphology indicating no overt evidence of pulmonary arterial hypertension. The pulmonic and aortic valves are normal in morphology and mobility. Normal pulmonic and mildly elevated aortic outflow velocities with laminar flow. No obvious aortic or pulmonic insufficiency. No pericardial or pleural effusion noted. No obvious cardiac masses.

				50	2.88 (7.1)	6.07 (8.3)	4.46 (7.4)

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Chronic degenerative valve disease persists with continued stability. The MR remains mild without left or right heart enlargement. No additional issues have developed.

Given these findings, no cardiac medications remain indicated. Continued assessment of progression in the future will help predict long term prognosis, which is highly variable at this stage. Omega fatty acid supplementation and mild salt restriction may be of some long-term benefit. Monitor for development of a cough, labored breathing, exercise intolerance or collapse episodes.

PATIENT

Maisie Sadowski

No cardiac contraindication to general anesthesia prior to chamber enlargement.

SPECIES

Canine

Recommend conservative monitoring with a recheck echocardiogram in 1 year, sooner if any development of clinical signs.
