AGE

2 years

WEIGHT

128 lbs

INTERPRETED BY

Maggie Machen Lamy,
DVM, DACVIM
(Cardiology)

IMAGING PERFORMED BY

PRESENTING CLINICAL SIGNS

History: Recheck.

Current medications: 100mg Sotalol BID

Pertinent prior holter results (7/15/22 MML): 20,855 singles only. Mexilitene added

Pertinent prior holter results (9/2/22 MML): 19,137 singles and pairs; no improvement on mexilitene; discontinued

Pertinent prior holter results (1/23/22 MML): 4961 singles only (12 hour recording)

HOLTER MONITOR FINDINGS AND RHYTHM ASSESSMENT

Time analyzed	23:54h
Mean heart rate	65bpm
Maximum heart rate	270bpm
Minimum heart rate	31bpm
VPCs	7855 singles
APCs	0

Interpretation: Single VPCs persist similar to the previous tracing. The frequency is unchanged given the timeframe (12h v 24h recording) with low markers of malignancy. Ventricular escape beats are noted in times of bradycardia, which is a normal response.

Rhythm diagnosis: Sinus rhythm with single VPCs.

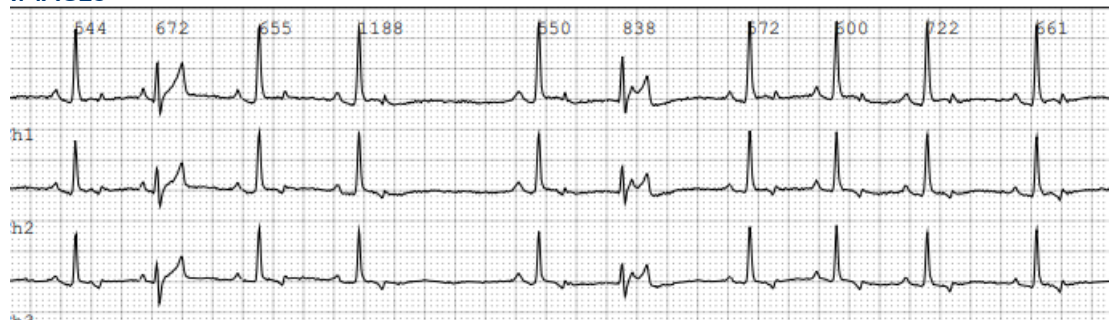

RECOMMENDATIONS

Overall stable disease with stable VPC count given the timeframe. No change otherwise, with low complexity.

Even with stability, there will always be risk for acute collapse and sudden death. Monitor at home for any signs of persistent arrhythmias, such as lethargy or collapse.

Recheck echocardiogram as dictated by the echo report. A recheck holter is suggested in 6 months, sooner if any symptoms are noted.
