PRESENTING CLINICAL SIGNS

History: Recheck echo. No heart murmur. On Simparica and Gabapentin. BP: 100, 110, 95, 105mmHg. Labs: CBC/Chem: NSF - T4: 1.8 - UA: USG 1.006 L. Sedated with Gabapentin, Trazadone and Torb. -Pertinent previous echo findings (4/2025 MML): CVD B1. Trace MR and TR. No LAE. LA: 1.9, LV: 3.2.

ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and doppler imaging is available. Mild diffuse thickening of mitral valve leaflets with no significant prolapse into the left atrial lumen. Trace mitral regurgitation with no left atrial dilation. Normal LV diameter with adequate myocardial function. The tricuspid valve appears normal with trace tricuspid regurgitation. Normal right atrial and ventricular diameter and morphology indicating no overt evidence of pulmonary arterial hypertension. The pulmonic and aortic valves are normal in morphology and mobility. Normal pulmonic and aortic outflow velocities with laminar flow. No obvious aortic or pulmonic insufficiency. No pericardial or pleural effusion noted. No obvious cardiac masses.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Compared to the prior study, there is no evidence of progression. Trace MR and TR are unchanged with normal four chamber dimensions.

Given these findings, certainly no cardiac medications are indicated. Reassessment is likely only necessary should a murmur develop in the future. Prognosis is open at this time.

PATIENT

No cardiac contraindication for general anesthesia.

Scout Lantz

Recommend conservative monitoring with a recheck echocardiogram should a murmur develop in the future.
