

DATE **PRESENTING CLINICAL SIGNS**
4/18/22 Not Slightly irregular, firm, non-inflamed pink dermal mass of 4mm noted on Annual Exam. Owner noted about 1 month ago. Located on left plantar metacarpus.

INTERPRETED BY **CYTOLOGY SUBMISSION**
L.D. McGill, DVM, Ph.D., DACVP FNA of Dermal

PATIENT **OBSERVATIONS**
Calvin Harwood Dermal mass: Submitted are 7 excellent videos of minimal to moderate collections of cells from the dermal mass on Calvin. There is a mixed collection with keratinized cells and a mixture of inflammatory cells including neutrophils and macrophages. There are individualized sebaceous glands and a few small clumps of sebaceous glands. There is a background of protein and RBCs.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS
Dermal mass - Consistent with sebaceous gland adenoma and secondary chronic inflammation.

SPECIES **COMMENTS**
Canine The sebaceous glands are strongly suggestive of a sebaceous gland adenoma. The inflammation is likely secondary. The keratinized cells can be secondary to the inflammation from the growth. Excision of the mass is expected to result in a favorable prognosis.
