

DATE PRESENTING CLINICAL SIGNS

4/28/22 Refusing food/appetite fluctuates/eating grass
Vomiting
Tacky/dark stool

INTERPRETED BY CYTOLOGY SUBMISSION

L.D. McGill, DVM,
Ph.D, DACVP Lymph node

PATIENT

Apex Steindorf

OBSERVATIONS

Lymph node: Submitted is a single video of cells collected from the lymph node in Apex. The cellularity is mainly RBCs with a minimal mixture of nucleated cells. The majority of the nucleated cells are neutrophils. There are scattered mature lymphocytes. Other specific cellularity is not identified.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

SPECIES Lymph node - Hemorrhagic collection with moderate numbers of neutrophils and small lymphocytes.

Canine

COMMENTS

The cellularity in this collection is not specific for any process. The neutrophils could support a chronic inflammatory process or be representative of the circulating neutrophilia if this is present in Apex. There is no suggestion of neoplasia in any of the cells. My concern is that this collection could be representative of circulating whole blood or representative of an inflammatory process in a lymph node. Recollection of cells or follow-up exploratory may be required to confirm the process. Treatment for inflammation is not out of line with the cellularity submitted in these videos.
