

PATIENT

Pita Pan

PRESENTING CLINICAL SIGNS

History: Grade 3/6 left-sided heart murmur.

SPECIES

Feline

ELECTROCARDIOGRAPHIC FINDINGS *Note: Single lead ECGs are evaluated as a rhythm strip. Morphology/MEA cannot be definitively commented on.

A single lead ECG is available; 50mm/s, 20mm/mV. The average heart rate is 230bpm with a largely regular rhythm. The QRS is low voltage and P waves cannot be identifiable. No ectopic beats, pauses or other dysrhythmias observed.

BREED

DSH

ECG diagnosis: Normal sinus tachycardia.

SEX

Female Spayed

ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and doppler imaging is available. The left ventricular wall is normal in dimension. There is a mildly hyperechoic endocardium consistent with mild fibrosis. The papillary muscles are normal in size and hyperechoic. The endocardium appears normal. The left atrium is normal in size. The right atrium is normal in size. The right ventricle appears normal. The mitral valve is normal in structure and mobility. Normal flow through both the RVOT and LVOT. No TR, AI or PI. No pleural or pericardial effusion seen. No obvious cardiac tumors.

AGE

2 years

CARDIAC CHART

WEIGHT

8.16lbs

FELINE CARDIAC PARAMETERS	BODY WEIGHT (kg)	HR (BPM)	IVSd (cm) (Moise, Pipers)	LVIDd (cm) (Moise, Pipers)	LWVd (cm) (Moise, Pipers)	FS (%)	EF (%)

Eubank Animal Clinic

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Overtly normal cardiac structure and function. The LV wall thickness is normal and there is no evidence of elevated left atrial pressure. No obvious congenital issues are documented. No cause for the murmur is identified in this study, making it likely physiologic in origin. Should the murmur persist or progress significantly, referral to a local Cardiologist may be warranted. The ECG is unremarkable with a normal sinus tachycardia.

Given these findings, no medications are indicated. It is important to note that phenotypic HCM can develop at any phase of life in cats (particularly in this predisposed breed), and often does not accompany a heart murmur or PE abnormalities. Periodic screening is ideally recommended in all cats.

DATE

5/16/22

PATIENT

Pita Pan

No cardiac contraindication for general anesthesia at this time.

SPECIES

Feline

Recommend recheck echocardiogram in 1 year to assess for development of disease, sooner if a murmur/gallop or clinical signs develop in the interim.
