PRESENTING CLINICAL SIGNS

History: Lexi is referred for lethargy noted in March. There was concern about tick borne diseases, but recent blood work, including tick testing, is normal. Her activity level has decreased somewhat. On exam: NSR, no murmurs noted, PSS, lung fields clear, mm pink, moist, CRT<2. BP 140mmHg x 4.

ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and Doppler imaging is available.

Left ventricle: The LV diameter is normal with adequate myocardial function. LV wall thicknesses are normal.

Left atrium: The left atrium is normal.

Mitral valve: The mitral valve is mildly thickened with no prolapse into the left atrial lumen. No MR.

Aortic valve/Aorta: The aortic valve is normal in morphology and mobility. Normal aortic outflow velocity. No aortic insufficiency.

Right ventricle: Normal right ventricular diameter and morphology indicating no overt evidence of pulmonary arterial hypertension.

Right atrium: Normal RA dimension.

Tricuspid valve: The tricuspid valve appears normal with no tricuspid regurgitation.

Pulmonic valve/Pulmonary artery: The pulmonic valve is normal in morphology and mobility. No pulmonic insufficiency. Normal RVOT velocity; laminar flow.

Pericardium/other: No pericardial or pleural effusion noted. No obvious cardiac masses.

Heart rhythm: ECG reveals a sinus rhythm with an average HR of 140bpm.

INTERPRETATION OF THE FINDINGS

Overtly normal cardiac structure and function. The overall dimensions are normal with no evidence of significant structural disease. Follow up is advised should a murmur be ausculted in the future. No additional issues are identified.

Prognosis is open.

RECOMMENDATIONS

- No cardiac medications are clearly indicated.
- No cardiac contraindication for general anesthesia. Premedicate with a vagolytic as discussed and ensure a normal response.
- Monitor for development of a cough, labored breathing, exercise intolerance or collapse episodes.
