DATE

6/19/23

PRESENTING CLINICAL SIGNS

History: Blacky is presently eating very well. She has been collapsing after exercise recently. The collapse episodes occur each time they go for a walk. Blacky lifts a paw, her eyes roll back and she falls over. She does not have any current C/S/V/D/PU/PD. *No diary provided.

HOLTER MONITOR FINDINGS AND RHYTHM ASSESSMENT

Time analyzed	22:09h
Mean heart rate	95bpm
Maximum heart rate	203bpm
Minimum heart rate	46bpm
VPCs	0
APCs	0

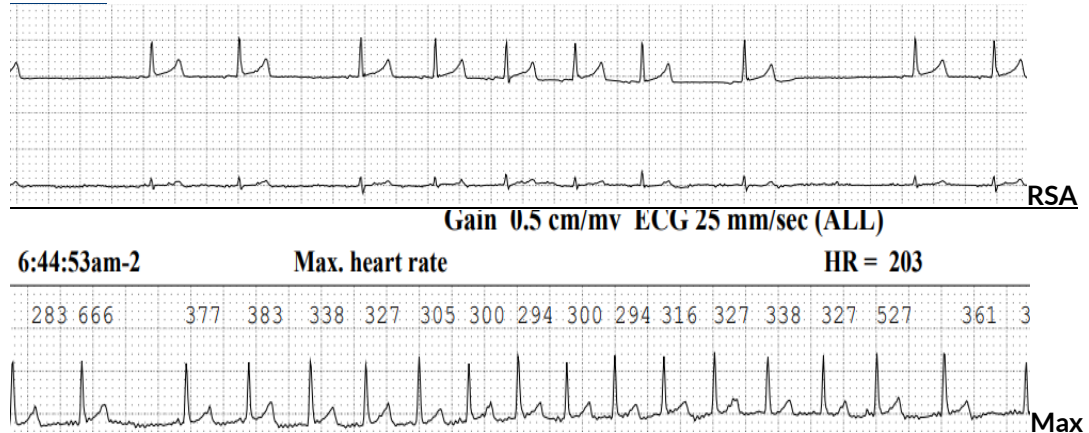

Interpretation: Underlying normal sinus rhythm with presumably appropriate rate variation (no diary provided). Max HR is sinus in origin. No dysrhythmias observed.

Rhythm diagnosis: Sinus rhythm.

RECOMMENDATIONS

Normal recording. If an arrhythmia is persistently ausculted, a repeat screening ECG is suggested. Other possible causes for the episodes should be considered. In the future, stimulating an episode and correlating the time of an episode to the time of the holter recording may be beneficial.

IMAGES

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
