ASSESSMENT/RECOMMENDATIONS

SPECIES

Feline

This examination demonstrates no evidence of structural heart disease. As such, no reason for Milo's elevated BNP level is appreciated in the image set. It's possible that the elevation could be a false positive result, though consideration should be given to the presence of a non-cardiac cause of the elevation, such as azotemia, systemic hypertension, or hyperthyroidism.

BREED

No therapy is recommended based on this exam.

DSH

A recheck echocardiogram is recommended if new physical exam and/or clinical abnormalities suggestive of the presence of cardiac dysfunction develop.
