PRESENTING CLINICAL SIGNS

History: Tobi has been hospitalized since 7/25 for grape ingestion. He has a history of diabetes for about 2 years. On the afternoon of 7/26 Tobi was noted to have crackles and mild to moderate respiratory effort; CXR were performed and he was placed in O2 cage; SpO2 was 84%; Tobi was given Furosemide, started on Unasyn, and IVF was discontinued; He improved since Furosemide dose and O2 therapy (SpO2 96%) Discussed aspiration pneumonia (from vomiting) vs PTE vs cardiac disease. -Radiographs: Pulmonary parenchyma & airways: Redundant tracheal membrane; alveolar pattern of right cranial/middle lung lobe; patchy interstitial to alveolar pattern in left cranial lung lobe.

ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and doppler imaging is available. Normal mitral valve leaflets with no prolapse into the left atrial lumen. No mitral regurgitation with no left atrial dilation. Normal LV diameter with adequate myocardial function. The tricuspid valve appears normal with no obvious tricuspid regurgitation. Normal right atrial and ventricular diameter and morphology indicating no overt evidence of pulmonary arterial hypertension. The pulmonic and aortic valves are normal in morphology and mobility. Normal pulmonic and aortic outflow velocities with laminar flow. No obvious aortic or pulmonic insufficiency. No pericardial or pleural effusion noted. No obvious cardiac masses.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Overtly normal cardiac dimensions and function, with no obvious dysfunction or dilation of the left heart. No significant valvular leaks are visualized, and no evidence of pulmonary hypertension.

These findings would suggest the recent respiratory and physical abnormalities are unlikely to be cardiogenic in origin. Although fluid overall can technically develop even with a normal heart, other possibilities are considered more likely, depending on fluid rate, volume status, etc.

SPECIES

Canine

Monitor for development of a heart murmur, cough, labored breathing, exercise intolerance or collapse episodes.

BREED

Pomeranian

Chronic respiratory issues can lead to pulmonary hypertension if poorly controlled and a recheck echocardiogram is recommended should any exertional syncope/dyspnea occur, or a murmur be noted in the future.
