## PRESENTING CLINICAL SIGNS

History: Recheck echo. Doing well. Grade 4/6 heart murmur. Overweight. BP: 154mmHg.  
-Current medications: Vetmedin.  
-Pertinent previous echo findings (12/2021 EL): No LA or LVE.

## ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and doppler imaging is available. Diffuse thickening of mitral valve leaflets (anterior>posterior) with mild prolapse into the left atrial lumen. Moderate eccentric mitral regurgitation with moderate left atrial dilation. Normal MR velocity. Mildly increased LV diameter with hyperdynamic myocardial function. The tricuspid valve appears subjectively normal, with trace tricuspid regurgitation. Normal velocity. Normal right atrial and ventricular diameter. The pulmonic and aortic valves are normal in morphology and mobility. Normal pulmonic and aortic outflow velocities. No aortic or pulmonic insufficiency. No pericardial or pleural effusion noted. No cardiac tumors observed.

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Chronic degenerative valve disease causing moderate mitral and trace tricuspid regurgitation. Moderate left atrial enlargement indicates there is relatively low risk for imminent complication, however risk for progression to spontaneous congestive heart failure in the future is elevated. No additional issues are identified. Compared to what is available from the prior study, there is no obvious evidence of progression.

Given these findings, continue Pimobendan is recommended. Assessment of progression in the future will help predict long term outcome, however prognosis is guarded at this stage (B2).

**PATIENT**

Spooky Goodmonson

Omega fatty acid supplementation and mild salt restriction may also be of some long-term benefit. Monitor for development of a progressive cough, labored breathing, exercise intolerance or collapse episodes.

**SPECIES**

Canine

Anesthetic risk is considered mildly elevated. Cardiac protective drug choices (opioid/benzodiazepine premedication, Propofol or alfaxalone induction, iso or sevo gas) are recommended. Monitor for arrhythmias, hypotension, and hypoxia both intra and post-operatively and intervene as necessary. Judicious IV fluid rates are recommended to avoid fluid overload. Avoid heart rate stimulating drugs such as atropine unless clinically indicated.

**BREED**

Goldendoodle

**SEX**

Male Neutered

**PLAN**

Continue Pimobendan as prescribed.

**AGE**

10 years

Recommend monitor for progression with a recheck echocardiogram in 6 months, sooner if any development of clinical signs.

**WEIGHT**

34.2lbs
