

PRESENTING CLINICAL SIGNS

History: Grade 3/6 murmur. Presented on 8/17/22 for hiding and anorexia.

DATE

8/23/22

ECHOCARDIOGRAPHIC FINDINGS

2D, M-mode, and Doppler study.

PERFORMED BY:

Tom McNeill

INTERPRETED BY

Keith Blass, DVM,
MS, DACVIM
(Cardiology)

PATIENT

Roadie Kopp

Left atrial size is normal. The mitral valve is normal. Left ventricular wall thickness is normal. Left ventricular internal dimensions are normal. Left ventricular systolic function is hyperdynamic. The aorta and aortic valve are normal. Right atrial and right ventricular dimensions are normal. The tricuspid valve is normal. The pulmonary artery and pulmonic valve are normal. No shunting lesions are visualized. No heartworms are visualized. No pericardial effusion or cardiac masses are seen.

LA/Ao - 1.38
IVSd - 4.4 mm
LVPWd - 4.3 mm
LVIDd - 15.8 mm
LVIDs - 5.4 mm
FS - 65.8%
LVOT - 0.96 m/s
RVOT - 1.04 m/s

Normal echocardiogram

This examination demonstrates no evidence of structural heart disease. While a definitive reason for Roadie's murmur was not identified, it's likely that his murmur is functional/innocent in nature, as no flow abnormalities that could result in the development of a pathologic murmur were appreciated in the image set. As such, no reason for Roadie's hiding and anorexia is appreciated in the image set.

No therapy is recommended based on this exam.

A recheck echocardiogram is recommended if the characteristics of Roadie's murmur change, or if other new physical exam and/or clinical abnormalities suggestive of cardiac dysfunction develop.

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
