

**PATIENT PRESENTING CLINICAL SIGNS**

Chloe Rackliff  
**SPECIES** Canine  
**BREED** Chihuahua  
**SEX** Female Spayed  
**AGE** 11 years  
**WEIGHT** 7lbs  
**INTERPRETED BY** Maggie Machen Lamy, DVM, DACVIM (Cardiology)  
**IMAGING PERFORMED BY** Karen Ebersole, DVM, DABVP  
**HOSPITAL NAME** Scanvet  
**REFERRING VET** Dr. Perkins

**History:** Recheck echo. Grade 4/6 heart murmur. Cough; worse at night. Assess prior to dental.  
**-Current medications:** Pimobendan 1.875 BID, Benazepril 2.5mg BID, Spironolactone 12.5 SID, Furosemide 10 mg TID, Hydrocodone 1.2mg/ml 0.5ml as needed for cough, giving every 2-3 days.  
**-Abnormal PE/Chem/CBC/UA Results:** BUN 47, Creat 0.9, Phos 3.9, TP 7.8, Glob 4.4, GGT 18, T Bili 1.0. BW (10/2022): BUN 30, Creat. 0.9, Phos 3.4.  
**-Pertinent previous echo findings (5/2022 MML):** Severe MR, severe LA/LVE, no TR. LA:2.6, LV; 3.3.

**ECHOCARDIOGRAM FINDINGS**

2D, m-mode and Doppler imaging are available. Diffuse thickening of mitral valve leaflets (anterior > posterior) with prolapse into the left atrial lumen. Severe eccentric mitral regurgitation with severe left atrial dilation. Significant LV dilation with hyperdynamic myocardial function. The tricuspid valve appears mildly thickened, with no tricuspid regurgitation. Normal right heart. The pulmonic and aortic valves are normal in morphology and mobility. Normal pulmonic and aortic outflow velocities. No pulmonic or aortic insufficiency. No pericardial or pleural effusion noted. No cardiac tumors observed.

**CARDIAC CHART**

CANINE CARDIAC PARAMETERS	MR VMAX (m/s)	TR VMAX (m/s)	LA/AO (Boon method)	LA/AO (Heart Base; Swe)	FS (%)	EF (%)	EPSS (cm)
<b>NORMAL PARAMETER</b>	4.5-5.5	<2.7	1.3	<1.6	28-40	40-100	<0.6
<b>PATIENT</b>	5.3	NA	1.9	2.2	58	92	NM
CANINE CARDIAC PARAMETERS	HR (BPM)	AV VMAX (m/s)	PV MAX (m/s)	BODY WEIGHT (kg)	LA 2D short axis Base view (cm)	LVIDd Avg; 2D and m-mode short axis (cm)	LVIDs Avg; 2D and m-mode short axis (cm)
<b>NORMAL PARAMETER</b>	50-100	0.7-1.7	0.7-1.6	BELOW	BELOW	BELOW	BELOW
<b>PATIENT</b>	NM	1.3	NM	3.2	2.9	3.3	1.4
*Normal chamber parameters expressed as a mean value (SD)				3	1.27 (5.3)	2.46 (2.46)	1.36 (5.5)
<b>BODY WEIGHT DEPENDENT PARAMETERS</b>				5	1.40 (4.5)	2.74 (5.2)	1.60 (4.7)
*Note: All measurements based upon multi-modal images and methods. An average value is reported.				10	1.50 (3.8)	3.27 (3.5)	2.06 (3.1)
				15	1.83 (2.0)	3.71 (2.4)	2.43 (2.1)
				20	2.02 (1.9)	4.14 (2.2)	2.80 (2.0)
				25	2.18 (2.4)	4.48 (2.9)	3.10 (2.5)
				30	2.33 (3.3)	4.83 (3.9)	3.39 (3.4)
				35	2.48 (4.3)	5.17 (5.0)	3.69 (4.5)
				40	2.62 (5.2)	5.48 (6.1)	3.96 (5.4)
				50	2.88 (7.1)	6.07 (8.3)	4.46 (7.4)

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Compared to the prior study, findings appear similar. Severe mitral regurgitation is unchanged with a slight increase in atrial dimension. Despite stability seen here, severe left atrial enlargement indicates the risk for spontaneous congestive heart failure is elevated. No additional issues are identified.

Given these findings, full cardiac support should be continued lifelong going forward. No obvious indication for medication adjustments at this time given that the patient is doing well at home.

Monitoring of sleeping breathing rates in the future will be paramount to determine the origin of any future cough. The average survival of canine patients with active pulmonary edema is 8-9 months on medications, however they generally are able to maintain a good quality of life for that period. Patient will always be at risk for recurrent CHF, development of arrhythmias/LA tear, syncope and/or sudden death in the future. Monitoring of renal values is recommended lifelong.

Omega fatty acid supplementation and mild salt restriction may also be of some long-term benefit. Monitor for development of a worsening cough, labored breathing, exercise intolerance or collapse episodes.

**Even with stability seen here, elective anesthesia is not advised** as there is high risk for complication. Risk:benefit ratio should be considered. Consider consultation with and/or referral to a facility with an anesthesiologist. Should you elect to proceed, cardiac protective drug choices (opioid/benzodiazepine premedication, propofol or alfaxalone induction, iso or sevoflurane gas) are recommended. Pre-oxygenate for 5-10 minutes prior to induction and recover in O2 cage. Monitor for arrhythmias, hypotension, and hypoxia both intra and post-operatively and intervene as necessary. Moderate IV fluid restriction is recommended to avoid fluid overload, while considering comorbidities, hydration status, BP, etc. Avoid heart rate stimulating drugs such as atropine unless clinically indicated.

## PLAN

Continue 4 medications as previously advised. Continue Hydrocodone as needed.

A renal panel and BP are recommended every 3-4 months on diuretics to ensure tolerance of medications.

A recheck echocardiogram is recommended in 6 months to screen for progression, sooner if clinical signs arise/persist.

## IMAGES

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. This report was generated using transcription software, and minor dictation errors may be present. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance, please contact me.
