

**PATIENT**

Suki Santin

**PRESENTING CLINICAL SIGNS**

History: Assess prior to anesthesia.

**SPECIES**

Canine

**ECHOCARDIOGRAM FINDINGS**

2D, m-mode, color flow and doppler imaging is available. Mild thickening of the mitral valve leaflets with no prolapse into the left atrial lumen. Trivial mitral regurgitation with a normal left atrial dimension. Normal MR velocity. Normal LV diameter with adequate myocardial function. The tricuspid valve appears normal with no tricuspid regurgitation. Normal right atrial and ventricular diameter and morphology indicating no overt evidence of pulmonary arterial hypertension. The pulmonic and aortic valves are normal in morphology and mobility. Normal pulmonic and aortic outflow velocities with laminar flow. Trivial aortic and no pulmonic insufficiency. No pericardial or pleural effusion noted. No obvious cardiac masses.

**BREED**

Jack Russell Terrier

**SEX**

Female Spayed

**CARDIAC CHART**

**AGE**

13 years

**WEIGHT**

24.9lbs

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Overtly normal cardiac dimensions and function, with no obvious dysfunction or dilation of the left heart. Trivial MR, which may reflect early valve disease. Follow up is advised should a murmur be ausculted in the future. Additionally, a trivial aortic valve insufficiency is noted, and a baseline BP is recommended. No other significant valvular leaks are visualized, and no evidence of pulmonary hypertension.

Monitor for development of a heart murmur, cough, labored breathing, exercise intolerance or collapse episodes.

**PATIENT**

Suki Santin

A recheck echocardiogram is recommended should a significant murmur develop, or signs of cardiac compromise be noted in the future.
