

PATIENT

Ady UCAT

PRESENTING CLINICAL SIGNS

History: Patient presents for panting after playing. No current medications.

SPECIES

Feline

ECHOCARDIOGRAM FINDINGS

2D, m-mode, color flow and doppler imaging is available. The left ventricular wall is normal in dimension. There is a mildly hyperechoic endocardium. The papillary muscles are normal. The left atrium is normal in size. The right heart and MPA appear normal. The mitral valve is normal in structure and mobility. Blood flow through both the LVOT and RVOT is normal in velocity. No obvious congenital shunts. No pleural or pericardial effusion seen. No obvious cardiac tumors.

 DVM, DACVIM
 (Cardiology)

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Overtly normal cardiac structure and function. The LV wall thickness is normal and there is no evidence of elevated left atrial pressure. No obvious congenital shunts or defects are visualized; however, it is important to note that small abnormalities are easily missed particularly in juvenile kittens.

IMAGING PERFORMED BY

Kelly Vazquez, CVT

HOSPITAL NAME

 Animal General on
 Hudson

Given these findings, no medications are indicated. No obvious structural cause for exercise intolerance is seen. Should the symptom worsen/persist, or a murmur be ausculted, referral is recommended.

REFERRING VET

Dr. Lang

No cardiac contraindication for general anesthesia.

Recommend recheck echocardiogram should a murmur, gallop or clinical signs of cardiac compromise be noted in the future.
