

DATE PRESENTING CLINICAL SIGNS

9/9/21

Hyporexia since the time the owner got another cat about 2 weeks now. The cats tend to fight with each other

INTERPRETED BY

L.D. McGill, DVM,
Ph.D., DACVP

Eosinophilic ulcer like lesions were seen on both upper lips. The gums were also very hyperemic and the cat also had pharyngeal inflammation. Blood work was normal. Impression smear for the upper lip lesion was made and submitted

CYTOLOGY SUBMISSION

FNA of Impression Smear - Suppurative inflammation

PATIENT OBSERVATIONS

Moon Sara

Impression Smear: Submitted is 1 video of very few cells collected from the lip lesion on Moon. The cells are neutrophils or smudge cells with scattered rod shaped bacteria and necrotic debris. Eosinophils were not present.

SPECIES

Feline

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Impression Smear - Suppurative inflammation with bacteria.

COMMENTS

BREED

Scottish fold

I was unable to identify eosinophils with the few cells represented. Neutrophils are prominent as are bacteria. A rodent ulcer or infected eosinophilic granuloma should be considered. Other specific agents are not identified. Antibiotics and anti-inflammatory agents may be beneficial.

SEX

Male

AGE

1 year 6 days

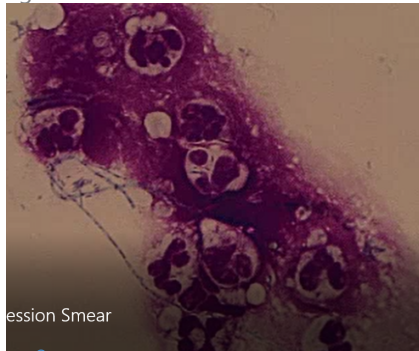

Image shows neutrophils with bacteria surrounded by necrotic debris or possible mucus.

WEIGHT

4.29

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.
