

## PATIENT

Bruno Bilynsky

## SPECIES

Canine

## BREED

Miniature Schnauzer

## SEX

Male Neutered

## AGE

5 Years

## WEIGHT

22.6 lbs.

## INTERPRETED BY

Andrea Nicastro, DVM,  
Diplomate ACVIM  
(Small Animal Internal  
Medicine)

## IMAGING PERFORMED BY

Kelly Vazquez, CVT

## HOSPITAL NAME

North Jersey AH

## REFERRING VET

Dr. Reidel

## INVOICE

11978kk

## DATE

10/8/21

## PRESENTING CLINICAL SIGNS

History: Sub Q mass left chest/under arm region, sudden development. FNA supports lipoma. No current meds.

Abnormal PE/Chem/CBC/UA Results:

## ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

*\*\*This is a limited exam of the subcutaneous, soft tissue area at the left axilla. There is a subcutaneous mass in this region which developed suddenly*

An approximately 3.4 cm hyperechoic to subtly heterogeneous, ill-defined mass is observed between the fascial planes in the subcutaneous region of the left axilla.

## ULTRASONOGRAPHIC FINDINGS

- The subcutaneous mass is most consistent with a lipoma with a lower possibility of a liposarcoma.

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Serial monitoring of the mass's size is recommended. If the lesion grows, consider re-aspiration. Mass removal should be considered if it impairs patient mobility.

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance, please contact me.
