

PATIENT

Maddie Szollosy

PRESENTING CLINICAL SIGNS

History: Recheck prev u/s on 10/31 showed unremarkable abd, now after being d/c from hosp having small amounts of pus from vulva when urinating

SPECIES

Canine

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

BREED

Boxer

Urinary System

The **urinary bladder** and visible portion of the pelvic urethra are normal for the degree of luminal distension. The urine is anechoic with no evidence of debris. Cystic calculi and discrete masses are not observed. The region of the trigone is normal.

SEX

Intact Female

The **left kidney** is normal size (6.45 cm in length); normal shape and architecture with smooth peripheral margins. There is a normal 1:3 cortex to medulla ratio with normal corticomedullary distinction. There is no evidence of pyelectasia, nephroliths, infarcts or hydronephrosis. Renal vasculature is normal.

AGE

7 mos

The **right kidney** is normal size (5.96 cm in length); normal shape and architecture with smooth peripheral margins. There is a normal 1:3 cortex to medulla ratio with normal corticomedullary distinction. There is no evidence of pyelectasia, nephroliths, infarcts or hydronephrosis. Renal vasculature is normal.

WEIGHT

38 lbs

Adrenal Glands

The left adrenal gland is normal size (0.47 cm at cranial pole) (0.51 cm at caudal pole) (2.19 cm in length); normal shape; homogenous parenchyma. The glandular echogenicity and detail are unremarkable. Capsule, cortex, and medullary definition are normal. The phrenicoabdominal vein and surrounding vasculature are normal.

INTERPRETED BY

Andrea Nicastro, DVM,
Diplomate ACVIM
(Small Animal Internal
Medicine)

The right adrenal gland is normal size (0.92 cm at cranial pole) (0.54 cm at caudal pole) (2.23 cm in length); normal shape; homogenous parenchyma. The glandular echogenicity and detail are unremarkable. Capsule, cortex, and medullary definition are normal. The phrenicoabdominal vein and surrounding vasculature are normal.

IMAGING PERFORMED BY

Jenn

Spleen

The **spleen** is normal in size (0.97 cm in width at the level of the hilus) with a normal capsular contour. There is appropriate echogenicity and echotexture. No focal lesions are observed. Splenic vasculature is normal.

HOSPITAL NAME

Rockaway AH

Liver

The **liver** is subjectively normal in size with normal contours and structure. There is appropriate echogenicity and echotexture. No overt structural evidence of inflammatory, infiltrative, or regenerative pathology is evident. Vascular and biliary tracts are of normal volume with no evidence of congestion. No pathological hepatic lymphadenopathy observed.

REFERRING VET

Dr. Maniar

The **gall bladder** lumen is moderately distended. The wall is thin and smooth. Luminal contents are anechoic. The cystic and common bile ducts are normal/not seen.

INVOICE

11974

Gastrointestinal

The **gastric lumen** is not distended. The gastric wall is normal in thickness with a normal layering pattern. The small intestinal lumen is not dilated. The small intestinal wall thickness is normal with a normal layering pattern and appropriate mural detail. Discreet masses are not identified. The colonic wall is normal. There is no evidence of an obstructive pattern.

DATE

11.4.22

Pancreas

PATIENT

Maddie Szollosy

The region of the pancreas is isoechoic relative to surrounding omental fat. No obvious parenchymal abnormalities are observed. There is no evidence of regional inflammation or effusion.

SPECIES

Canine

Free Abdomen

The **peritoneal cavity** is normal. There is no evidence of inflammation or effusion. The abdominal **lymph nodes** are normal/not visible.

BREED

Boxer

Other

The left uterine horn is visible (0.51 cm in diameter). No obvious pathology is observed. The ovaries are not definitively visualized.

SEX

Intact Female

- Unremarkable abdomen. An obvious cause for the patient's clinical signs is not identified in this study. Considerations include urinary tract infection, puppy vaginitis, perivulvar dermatitis, emerging pyometra (unlikely), other.

AGE

7 mos

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

A urinalysis with culture and sensitivity is recommended.

WEIGHT

38 lbs

Consider vaginal cytology to further assess for puppy vaginitis.

A thorough evaluation of external genitalia is recommended to rule out perivulvar dermatitis, vaginal foreign bodies and anatomic anomalies.

INTERPRETED BY

Therapeutically, consider the use of baby wipes in the region of the external genitalia.
