PRESENTING CLINICAL SIGNS

Patient was adopted from the shelter. Was told she was spayed, now having bloody vulvar discharge. Ultrasound to assess for the presence of a uterus and ovaries.

**This study was limited to the uterus and ovaries. There is a potential for pathology in organs that were not visualized

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Uterus

The left (0.73 cm in width) and right (0.65 cm in width) uterine horns are visible and are subjectively normal-in-size. The uterine body is also visible, with subjectively thickened walls (up to 0.72 cm). The uterine lumen is not overtly dilated.

Ovaries

The left ovary is visible (1.42 x 1.42 cm). No obvious obvious pathology is observed. At least one corpus luteum is visualized.

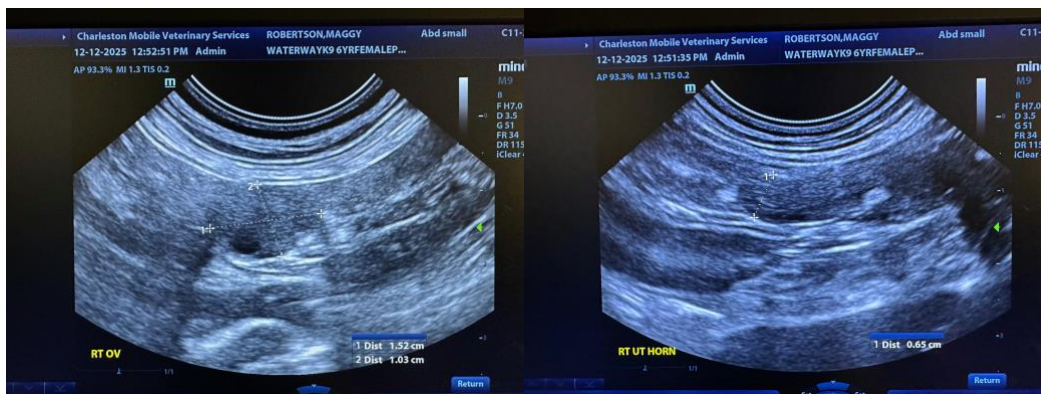

The right ovary is visible (1.52 x 1.03 cm). No obvious pathology is observed.

ULTRASONOGRAPHIC FINDINGS

Intact female, suspected to be in heat.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Ovariohysterectomy should be considered.
