

PATIENT PRESENTING CLINICAL SIGNS

Maisie Pastor History: Ate 5 tampons

SPECIES ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Canine *Urinary System*

The urinary bladder wall is normal in thickness. The mucosal surface is smooth. The bladder is distended. Luminal contents are anechoic. No cystic calculi are observed. The region of the trigone and visible portion of the proximal urethra are normal.

BREED

Basset Mix

The left kidney is normal in size (6.18 cm in length) with a normal shape, architecture and smooth peripheral margins. There is a normal 1:3 cortex to medulla ratio with normal corticomedullary distinction. There is no evidence of pyelectasia, nephroliths, infarcts or hydronephrosis. Renal vasculature is normal.

SEX

Female Spayed

The right kidney is normal in size (6.68 cm in length) with a normal shape, architecture and smooth peripheral margins. There is a normal 1:3 cortex to medulla ratio with normal corticomedullary distinction. There is no evidence of pyelectasia, nephroliths, infarcts or hydronephrosis. Renal vasculature is normal.

AGE

3

Adrenal Glands

The region of the adrenal glands is evaluated. No obvious pathology is observed in this region.

WEIGHT

57

Spleen

The spleen is normal in size (1.99 cm in width at the level of the hilus) with a normal capsular contour. There is appropriate echogenicity and echotexture. No focal lesions are observed. Splenic vasculature is normal.

INTERPRETED BY

Andrea Nicastro DVM
Diplomate ACVIM
(Sm Animal Internal Med)

Liver

The liver is subjectively normal in size with normal contours and structure. There is appropriate echogenicity and echotexture. No overt structural evidence of inflammatory, infiltrative, or regenerative pathology is evident. Vascular and biliary tracts are of normal volume with no evidence of congestion.

IMAGING PERFORMED BY

Jenn

The gallbladder is of normal contours and contains some dependent echogenic debris. The wall is normal in thickness. No choleliths are observed. The cystic and common bile ducts are normal/not seen.

HOSPITAL NAME

Rockaway AH

Gastrointestinal

The gastric lumen is mildly to moderately distended with soft, shadowing material. The gastric wall is normal in thickness with a normal layering pattern. The small intestinal lumen is not dilated. The small intestinal wall is normal in thickness with a normal layering pattern and appropriate mural detail. Discreet masses are not identified. The colonic wall is normal.

REFERRING VET

Dr Maniar

Pancreas

The region of the pancreas is isoechoic relative to surrounding omental fat. No obvious parenchymal abnormalities are observed. There is no evidence of regional inflammation or effusion.

INVOICE

22267

Lymph Nodes

The abdominal lymph nodes are normal/not visible.

DATE

12-15-25

Free Abdomen

The peritoneal cavity is normal. There is no evidence of inflammation or effusion.

PATIENT ULTRASONOGRAPHIC FINDINGS

Maisie Pastor The soft, shadowing material within the gastric lumen, in conjunction with the patient's clinical history, is most consistent with gastric foreign material with a lower possibility of normal ingesta.

SPECIES INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Canine Consider an upper GI endoscopy or gastrotomy to remove any foreign material.
