

PATIENT PRESENTING CLINICAL SIGNS

Bailey Baracaldo History: Vomited up rabbit feces, went under bed and hid and urinated
Abnormal PE/Chem/CBC/UA Results: K 3.3 ALB 4.3

SPECIES ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Canine

Urinary System

The urinary bladder wall is normal in thickness. The mucosal surface is smooth. The bladder is moderately distended. Luminal contents are mostly anechoic. No cystic calculi are observed. The region of the trigone is normal.

BREED

Poodle Mix

SEX

The left kidney is subjectively normal-in-size with a normal shape, architecture and smooth peripheral margins. There is a normal 1:3 cortex to medulla ratio with normal corticomedullary distinction. There is no evidence of pyelectasia, nephroliths, infarcts or hydroureter. Renal vasculature is normal.

Female Spayed

AGE

The right kidney is normal in size (6.32 cm in length) with a normal shape, architecture and smooth peripheral margins. There is a normal 1:3 cortex to medulla ratio with normal corticomedullary distinction. There is no evidence of pyelectasia, nephroliths, infarcts or hydroureter. Renal vasculature is normal.

4

Adrenal Glands

WEIGHT

The left adrenal gland is normal in size (0.51 cm at cranial pole) (0.46 cm at caudal pole) with a normal shape and homogenous parenchyma. The glandular echogenicity and detail are unremarkable. Capsule, cortex, and medullary definition are normal. The phrenicoabdominal vein and surrounding vasculature are normal.

46.8

INTERPRETED BY

The region of the right adrenal gland is evaluated. No obvious pathology is observed in this region.

Andrea Nicastro DVM
Diplomate ACVIM
(Sm Animal Internal Med)

Spleen

The spleen is normal in size (2.35 cm in width at the level of the hilus) with a normal capsular contour. There is appropriate echogenicity and echotexture. No focal lesions are observed. Splenic vasculature is normal.

IMAGING PERFORMED BY

Liver

Jenn

The liver is subjectively normal in size with normal contours and structure. There is appropriate echogenicity and echotexture. No overt structural evidence of inflammatory, infiltrative, or regenerative pathology is evident. Vascular and biliary tracts are of normal volume with no evidence of congestion.

HOSPITAL NAME

Rockaway AH

The gallbladder lumen is moderately distended. The wall is thin and smooth. Luminal contents are anechoic. The cystic and common bile ducts are normal/not seen.

REFERRING VET

Gastrointestinal

Dr Maniar

The gastric lumen is not distended. The gastric wall is normal in thickness with a normal layering pattern. The small intestinal lumen is not dilated. The small intestinal wall is normal in thickness with a normal layering pattern and appropriate mural detail. Discreet masses are not identified. The colonic wall is normal. There is no evidence of an obstructive pattern.

INVOICE

22781

Pancreas

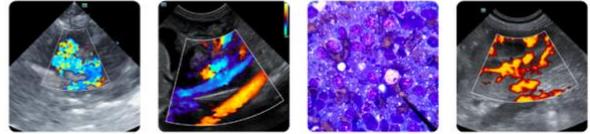

The region of the pancreas is isoechoic relative to surrounding omental fat. No obvious parenchymal abnormalities are observed. There is no evidence of regional inflammation or effusion.

DATE

3-31-26

Lymph Nodes

The abdominal lymph nodes are normal/not visible.

PATIENT *Free Abdomen*

The peritoneal cavity is normal. There is no evidence of inflammation or effusion.

Bailey Baracaldo

Other

A brief echocardiogram reveals no obvious evidence of pericardial or pleural effusion in the visible window.

SPECIES

Canine

ULTRASONOGRAPHIC FINDINGS

Structurally unremarkable abdomen.

BREED

Poodle Mix

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

SEX

- A fecal evaluation for ova and Giardia is recommended.
- Supportive care for acute gastroenteritis should be initiated.
- If clinical signs persist despite medical management, further GI workup may be warranted.
