

**DATE PRESENTING CLINICAL SIGNS**

5/16/2022 From ER report: Pericardial effusion seen on TFAST.

PATIENT

Raven Dvorak

Date of Previous IntraPet Ultrasound: No previous.
 Sedation: Not required to complete full diagnostic ultrasound, very sweet dog.
 Stat Report: Not requested.
 Imaging Performed By: Andi Parkinson, BS, RDMS

SPECIES

Canine

LIMITED ULTRASONOGRAPHIC EXAMINATION**BREED**

Chow Mix

Visualization of the heart reveals a 3.68 x 2.43 cm irregular echogenic mass at the heart base. On the long axis view, it lies between the aorta and left atrium. There is no obvious evidence of pericardial or pleural effusion.

SEX

Spayed Female

ULTRASONOGRAPHIC FINDINGS

- Heart-based mass. Neoplasia (i.e., chemodectoma, lymphoma, hemangiosarcoma, ectopic thyroid tumor) is considered likely, with a lower possibility of a benign process (i.e., granuloma, inflammatory focus).

AGE

3/14/2009

WEIGHT

75 lbs

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**INTERPRETED BY**

Three-view thoracic radiographs are recommended to assess for pulmonary metastases.

Andrea Nicastro, DMV,
 Diplomate DACVIM
 (Small Animal
 Internal Medicine)

Consider an abdominal ultrasound to assess for neoplasia in the abdomen. Consider consultation with a board-certified oncologist for further diagnostics/treatment recommendations.
