

**DATE**

5/17/22

**PRESENTING CLINICAL SIGNS**

Patient presents for evaluation of subocular swelling and elevation of third eyelid OS, patient is FIV positive. IOP's are high normal. Patient is also sneezing and congested. Skull and nasal rads likely to be performed pending US results.

**PATIENT**

Bandit Kneavel

Current Medications: None.

Lab Results: FIV positive. CBC chem WNL, T4 normal

Date of Previous IntraPet Ultrasound: No previous.

Sedation: Not required to complete full diagnostic ultrasound.

Stat Report: Not requested.

**SPECIES**

Feline

Imaging Performed By: Andi Parkinson, BS, RDMS.

**BREED**

Domestic shorthair

**ULTRASONOGRAPHIC EXAMINATION OF THE EYES****Left Eye****SEX**

Female, spayed

A 2.00 x 1.30 cm irregular, hypoechoic, uniformly textured, vascular mass/density is observed posterior to the globe. The globe itself appears intact. There is no obvious evidence of retinal detachment or hemorrhage within the posterior chamber.

**AGE**

8/26/2015

**Right Eye**

Intact globe. No obvious pathology posterior to the globe.

**WEIGHT**

9.7 lbs.

**ULTRASONOGRAPHIC FINDINGS**

Left retrobulbar mass/density. Neoplasia (i.e., lymphoma, optic nerve sheath tumor) is suspected. However, an inflammatory process (i.e., abscess) or a granuloma cannot be completely excluded.

**INTERPRETED BY**

Andrea Nicastro, DVM,  
Diplomate ACVIM  
(Small Animal Internal  
Medicine)

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

- Three-view thoracic radiographs are recommended to assess for pulmonary metastases.
- Consider referral to a board-certified ophthalmologist to determine if ultrasound guided fine needle aspiration is an option. An MRI may also be useful in determining the extent of the lesion.

**HOSPITAL NAME**

Perry Hall AH

**REFERRING VET**

Dr. Miller
